

India's Telecom Usage

2015-18

Data Guide - May 2019

About Telecom Data Guide

With most of its urban population using more than one phone connection per person and rural teledensity shooting up, India's wireless telecom story has been remarkable. Before the wireline phones could reach the hinterlands of India, wireless took over in a big way.

Today, an Indian internet user is consuming nearly 9 GB data every month. The cost of this data has crashed. More and more people are now reachable via a mobile phone and internet. This has a significant impact on how business can be conducted and social impact programmes can be designed and delivered to reach maximum number of people in a cost-effective and timely manner.

This telecom data guide covers :

- Subscriber numbers : Wireline, wireless, rural and urban
- Teledensity : Rural and urban, service area-wise
- Internet users : Wireline, wireless, rural and urban
- Internet density : Rural and urban
- Data usage trends

Data Sources :

- Telecom Regulatory Authority of India (TRAI)
- Department of telecommunication
- UIDAI
- *IDI analysis*

About Telecom Data Guide

This is a detailed telecom usage study designed to provide actionable insights on :

- regions of high and low teledensity
- regions of high and low internet density
- trends in data usage
- data cost trends
- gender split in connection ownership

This data guide is an essential tool if you are a :

- CSR practitioner working on creating effective programmes
- non-profit organisation / social enterprise looking to understand reach and usage of phones and internet
- policy maker/ researcher studying telecom usage trends

This Data Guide is produced by India Data Insights (www.IndiaDataInsights.com).

India Data Insights is an online portal delivering actionable data-driven insights to social sector professionals at a click of a button. We power sharper and quicker decision making, so that you can spend more time and resources on delivering better programmes and impact.

We are a part of Sattva Consulting (www.Sattva.co.in) and our work is powered by Sattva's decade-long experience in designing and delivering high impact programmes in emerging economies across the world.

40-60 > 100

Access to telecommunications – mobile phone and internet - play an important role in people's lives today. Access to important news and local notifications, financial services, healthcare and government schemes improves with better access to telecom services.

Today, there is some connect between telecom penetration in a region and its income level. The states with higher income have better telecom penetration among its population.

Detailed views of how telecom usage has evolved in each state are available as an interactive dashboard here :
